

DOUBLE SIDED
STICKERS

SALES GUIDE FACT SHEET

Double Sided Stickers

“Auto Service, Parking Permit & Window Decals”

Our double sided stickers can either be printed on 1 OR 2 sides.

Double sided products with only 1 side printed would be applicable where the client wishes to apply a notice, display or sign to the inside of a glass surface and for it to be visible from the outside. Reasons may be to avoid tampering or to protect the cleanliness of the print.

Double sided products where both sides are printed are popular for uses such as auto service stickers (where often one side is a writable surface) and for parking permits where information is required on both sides, however the application of these products is fairly wide.

The other popular use is for business and retail entrances where either a promotional, wayfinding or info graphic is placed.

These double sided products can be supplied as sheets or singles, but not as rolls.

Other product options include:

Printed with variable data including permit numbers or barcodes

Removable (no residue) adhesive

Blockout vinyls to ensure no “see through”

Material options with a UV life from 1 to 5 years.

Make sure that you discuss with our team the anticipated use or environment that is intended for the product. By requesting specs above what you need, you may find yourself paying more than is necessary.

This range of material was created primarily to make it easier for our resellers to discuss our product options with their clients. For more specific or detailed information, please contact us directly.
